

# **1 ModPerl::MM -- A "subclass" of ExtUtils::Make-Maker for mod\_perl 2.0**

## 1.1 Synopsis

```
use ModPerl::MM;

# ModPerl::MM takes care of doing all the dirty job of overriding
ModPerl::MM::WriteMakefile(...);

# if there is a need to extend the default methods
sub MY::constants {
    my $self = shift;
    $self->ModPerl::MM::MY::constants;
    # do something else;
}

# or prevent overriding completely
sub MY::constants { shift->MM::constants(@_); }";

# override the default value of WriteMakefile's attribute
my $extra_inc = "/foo/include";
ModPerl::MM::WriteMakefile(
    ...
    INC => $extra_inc,
    ...
);

# extend the default value of WriteMakefile's attribute
my $extra_inc = "/foo/include";
ModPerl::MM::WriteMakefile(
    ...
    INC => join " ", $extra_inc, ModPerl::MM::get_def_opt('INC'),
    ...
);

```

## 1.2 Description

`ModPerl::MM` is a "subclass" of `ExtUtils::MakeMaker` for `mod_perl 2.0`, to a degree of sub-classability of `ExtUtils::MakeMaker`.

When `ModPerl::MM::WriteMakefile()` is used instead of `ExtUtils::MakeMaker::WriteMakefile()`, `ModPerl::MM` overrides several `ExtUtils::MakeMaker` methods behind the scenes and supplies default `WriteMakefile()` arguments adjusted for `mod_perl 2.0` build. It's written in such a way so that normally 3rd party module developers for `mod_perl 2.0`, don't need to mess with `Makefile.PL` at all.

## 1.3 `MY::` Default Methods

`ModPerl::MM` overrides method `foo` as long as `Makefile.PL` hasn't already specified a method `MY::foo`. If the latter happens, `ModPerl::MM` will DWIM and do nothing.

In case the functionality of `ModPerl::MM` methods needs to be extended, rather than completely overridden, the `ModPerl::MM` methods can be called internally. For example if you need to modify constants in addition to the modifications applied by `ModPerl::MM::MY::constants`, call the `ModPerl::MM::MY::constants` method (notice that it resides in the package `ModPerl::MM::MY` and not `ModPerl::MM`), then do your extra manipulations on constants:

```
# if there is a need to extend the methods
sub MY::constants {
    my $self = shift;
    $self->ModPerl::MM::MY::constants;
    # do something else;
}
```

In certain cases a developers may want to prevent from `ModPerl::MM` to override certain methods. In that case an explicit override in `Makefile.PL` will do the job. For example if you don't want the `constants()` method to be overriden by `ModPerl::MM`, add to your `Makefile.PL`:

```
sub MY::constants { shift->MM::constants(@_) ; }";
```

`ModPerl::MM` overrides the following methods:

### 1.3.1 `ModPerl::MM::MY::post_initialize`

This method is deprecated.

## 1.4 WriteMakefile() Default Arguments

`ModPerl::MM::WriteMakefile` supplies default arguments such as `INC` and `TYPEMAPS` unless they weren't passed to `ModPerl::MM::WriteMakefile` from `Makefile.PL`.

If the default values aren't satisfying these should be overriden in `Makefile.PL`. For example to supply an empty `INC`, explicitly set the argument in `Makefile.PL`.

```
ModPerl::MM::WriteMakefile(
    ...
    INC => '',
    ...
);
```

If instead of fully overriding the default arguments, you want to extend or modify them, they can be retrieved using the `ModPerl::MM::get_def_opt()` function. The following example appends an extra value to the default `INC` attribute:

```
my $extra_inc = "/foo/include";
ModPerl::MM::WriteMakefile(
    ...
    INC => join " ", $extra_inc, ModPerl::MM::get_def_opt('INC'),
    ...
);
```

`ModPerl::MM` supplies default values for the following `ModPerl::MM::WriteMakefile` attributes:

### ***1.4.1 CCFLAGS***

### ***1.4.2 LIBS***

### ***1.4.3 INC***

### ***1.4.4 OPTIMIZE***

### ***1.4.5 LDDLFLAGS***

### ***1.4.6 TYPEMAPS***

### ***1.4.7 dynamic\_lib***

#### ***1.4.7.1 OTHERLDFLAGS***

```
dynamic_lib => { OTHERLDFLAGS => ... }
```

### ***1.4.8 macro***

#### ***1.4.8.1 MOD\_INSTALL***

```
macro => { MOD_INSTALL => ... }
```

makes sure that Apache-Test/ is added to @INC.

## **1.5 Public API**

The following functions are a part of the public API. They are described elsewhere in this document.

### ***1.5.1 WriteMakefile()***

```
ModPerl::MM::WriteMakefile(...);
```

### ***1.5.2 get\_def\_opt()***

```
my $def_val = ModPerl::MM::get_def_opt($key);
```
